## National Genetics Education and Family Support Center

This presentation is supported by the Health Resources and Services Administration (HRSA) of the U.S. Department of Health and Human Services (HHS) as part of an award totaling \$400,000 with 0 percent financed with non-governmental sources. The contents are those of the author(s) and do not necessarily represent the official views of, nor an endorsement, by HRSA, HHS, or the U.S. Government. For more information, please visit [HRSA.gov](https://www.hrsa.gov).

# Housekeeping

---

- This webinar is scheduled to last 1 hour, including Q&A.
- All dial-in participants will be muted to enable the speakers to present without interruption.
- The webinar is being recorded and will be sent via email with the slides, infographic and a brief evaluation survey after the live presentation.
- Questions can be submitted via the chat function at any time during this presentation. We will have a dedicated time to answer questions at the end of the presentation.

# Agenda

---

- Introduction to the Family Center
- Overview of Telegenetics
- Telewhat?! Infographic
- Other Telegenetics & Telehealth Resources
- What Families Need to Know: Provider Perspectives
- What Families Need to Know: Family Leaders' Perspective
- Questions

# National Genetics Education and Family Support Center (Family Center)

---

**Made up of:**

**P2P USA**

**Funded by HRSA to:**

- Help families develop skills to partner with professionals and improve systems of care
- Assist RGNs in partnering with families & family-led orgs
- Assist with outreach to diverse & medically underserved families
- Provide Education & Support

National Genetics Education  
and Family Support Center

# Overview of Telegenetics

# What is Telegenetics?

---

- Appointment with a genetics healthcare provider using:
  - Computer
  - Phone
  - Tablet
- Takes place in:
  - Provider's office near you
  - Your Home
  - Other settings
- Four main types of Telegenetics appointments:
  - Video conferencing
  - Store and forward
  - Remote monitoring
  - Mobile health

# How Does a Live Video Conferencing Visit Work?

---

- 30 – 60 minute appointment
- Collect medical history and family history
- Local provider may help with a physical exam
- Recommendations for follow-up (e.g. genetic testing)

# Why is it Important?

---

- Improves access to genetic services
- Helps reduce the effects of common barriers such as
  - Distance
  - Time
  - Childcare
  - Mobility challenges
  - Transportation
- Provides significant benefits to families
  - Less distance
  - Less cost
  - Time savings
  - Increased # of available providers
  - More access to early detection
  - Increased patient satisfaction

# Telewhat?! Infographic

- Individuals and Families
  - Learn about Telegenetics
  - Prepare for a Telegenetics appointment
  - Share with other families
- Providers
  - Share with Telegenetics patients
  - Share with other providers
- Advocacy and Support Organizations
  - Disseminate the infographic to families
  - Share the infographic on social media
  - Upload the infographic to your website

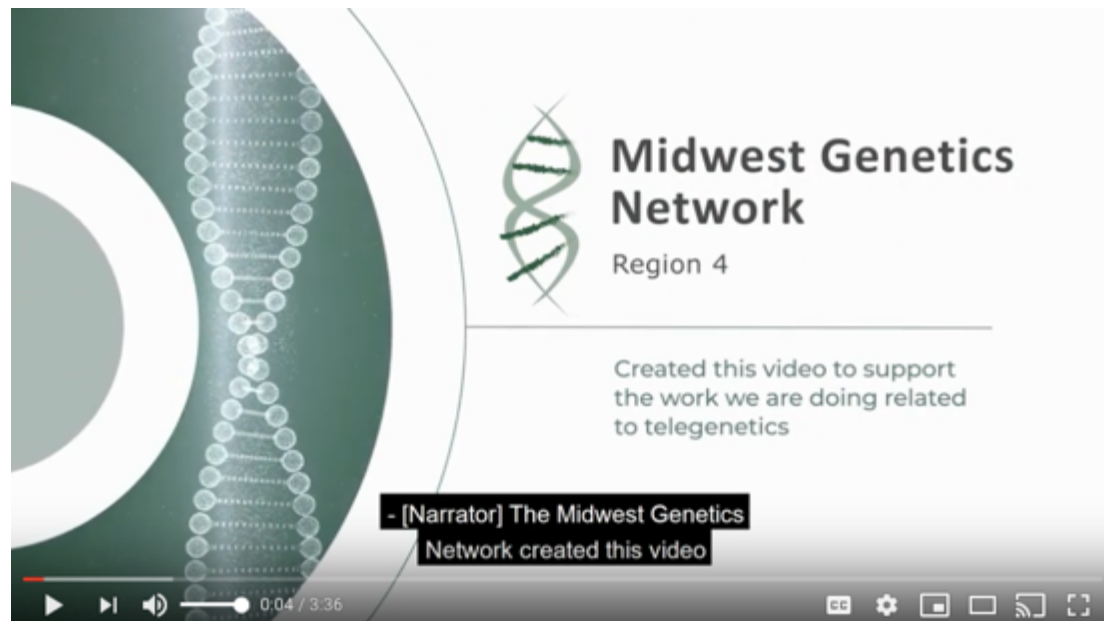

# Additional Telehealth & Telegenetics Resources for Families and Providers

# COVID-19 Resources

## EMERGENCY PREPAREDNESS RESOURCES FOR GENETIC PROVIDERS AND PATIENTS

Click below for resources developed by the RGNs, NCC, TRCs, CDC, and Family Voices.

**NYMAC EMERGENCY PREPAREDNESS CARDS**  
Condition-specific printable cards to be carried in case of emergency.

**SERN EMERGENCY PREPAREDNESS TOOLKIT**  
Condition-specific list of supplies needed in case of emergency, as well as a general list of basic emergency preparedness supplies.

**NCC "FIND A GENETICS CLINIC" DIRECTORY**  
Find a genetics clinic throughout the United States by visiting [clinics.acmg.net](https://clinics.acmg.net).

**CDC COMMUNITY ACTIVITY CALL COVID-19**  
On March 12, CDC held a call for clinicians about how to care for children and pregnant women.

**NCTRC TELEHEALTH AND COVID-19**  
The National Consortium of Telehealth Resource Centers (NCTRC) will be holding a webinar on March 19th about telehealth and COVID-19.

**CDC COVID-19 FACT SHEETS**  
Printable materials about COVID-19 can be found from the CDC.

**CDC COVID-19 PREGNANCY FACT SHEET**  
Information about COVID-19 for pregnant women.

**FAMILY VOICES COVID-19**  
Family Voices has a webpage dedicated to resources for families.

All resources developed that are relevant to the genetics community, NCC will add them to Rele, available at [nccrg.org/resources](https://nccrg.org/resources).

## National Consortium of Telehealth Resource Centers

# COVID-19 Telehealth Toolkit

March 18, 2020

## What is COVID-19?

Coronavirus disease 2019 (COVID-19) is a novel coronavirus that has not been previously identified. Symptoms include cough, difficulty breathing, fever, and mild to severe respiratory illness. According to the [Centers for Disease Control and Prevention \(CDC\)](https://www.cdc.gov/media/releases/2020/s0318-novel-coronavirus.html), the virus currently seems to be easily spreading throughout communities in the United States ([community spread](https://www.cdc.gov/media/releases/2020/s0318-novel-coronavirus.html)), meaning "some people have been infected and it is not known how or where they became exposed".

## What is Telehealth?

The [Health Resources and Services Administration \(HRSA\)](https://www.hhs.gov/health-care/telehealth/) of the U.S. Department of Health and Human Services defines telehealth as the use of electronic information and telecommunications technologies to support and promote long-distance clinical health care, patient and professional health-related education, public health and health administration.

Telehealth can address COVID-19 and other epidemic situations by limiting exposure to infection for vulnerable populations and health care workers. Telehealth can also expand the reach of resources to communities that have limited access to needed services. This allows patients to receive health services away from settings where potential for contracting COVID-19 are high, such as hospitals, health clinic waiting rooms, private practices, etc.

The [National Consortium of Telehealth Resource Centers \(NCTRC\)](https://nccrg.org/) is composed of 12 regional and 2 national federally-funded telehealth resource centers (TRCs) who offer assistance and resources for the planning and implementation of telehealth operations. [Reach out to your regional TRC](https://nccrg.org/) for more information on telehealth and COVID-19. For a comprehensive collection of resources related to telehealth and COVID-19 response refer to the [Northeast Telehealth Resource Center \(NETRC\) COVID-19 Epidemic Telehealth Weblogography Toolkit](https://nccrg.org/).

# Regional Genetics Networks: COVID-19 Resources

---

## TELEHEALTH RESOURCES

This is a curated list of telehealth resources to get providers up and running with telehealth. Due to the COVID-19 crisis, we have included telehealth resources specifically for COVID-19, as well as, regular telehealth resources.

We will continue to update the page as we get new information.

- [General Telehealth Implementation Resources](#)
- [Best Practices for Telehealth Providers](#)
- [Telehealth Resources for Patients](#)
- [Telegenetics Implementation](#)

### Telehealth Resources for COVID-19

Telehealth policies are rapidly changing to support activities in response to COVID-19. You may want to sign up to get notices from the HRSA funded [Center for Connected Health Policy](#).

## Telemedicine and Telehealth Resources for COVID 19

March 25, 2020

With the current pandemic involving the coronavirus, COVID19 , many specialty and primary care providers are transitioning rapidly to utilizing telehealth modalities. We have gathered some of the resources that are available to help medical practices find the information and guidance they need to meet the ever-changing needs of their patients during this time.

If you are just beginning telehealth implementation, one of the best resources is to reach out to the [Telehealth Resources Center \(TRC\)](#) that your state belongs to. Unsure which TRC services you, click here to access their [clickable map](#) and connect directly to the one for your state.

# NCTRC: How Patients Can Engage Telehealth

March 2020

[www.TelehealthResourceCenter.org](http://www.TelehealthResourceCenter.org)

## How Patients Can Engage Telehealth

Telehealth is a way to receive healthcare services digitally. Telehealth lets you videoconference with doctors through computers, tablets, or smartphones and virtually connect to your local clinic or other health locations without leaving your home.

Ask yourself these questions before trying out telehealth:

### How Can I Start Receiving Telehealth Services?

Many healthcare organizations are already set up to provide telehealth. Depending on your needs, telehealth can be used for many different health care services. For example, telehealth is widely used for behavioral health needs, such as therapy or medication management.

### What Equipment Do I Need?

Stable internet and a computer, tablet, or smartphone are all that's needed to use telehealth. If you are going to a clinic, doctors office, hospital, or other health care location to receive telehealth services, you do not need to bring your own equipment.

### Is My Personal Health Information Safe?

All health care organizations already ensure your health information is safe and protected. The same thing goes for telehealth – there is no exception. If you're worried about your protected health information, ask your doctor how they're keeping your information safe.

March 2020

[www.TelehealthResourceCenter.org](http://www.TelehealthResourceCenter.org)

## Can I Trust the Telehealth Doctor?

Meeting a new doctor can be nerve-wracking. States make it easy to find a doctor's education and credentials online. You can find out if your doctor has a medical license through your state's professional licensing board. Without a license, the doctor is not allowed to practice medicine.

This information is easily found through the Federation of State Professional Boards' website: <https://www.fsmb.org/contact-a-state-medical-board>.

Let's Summarize

### What is Telehealth?

- Telehealth is a virtual way to deliver healthcare. Patients have the option to stay at home and receive health services.

### What Do I Need for Telehealth?

- All you need is stable internet and a device with both video and audio capabilities to connect.

### Is Telehealth Safe and Reliable?

- Telehealth has revolutionized the world of healthcare and many hospitals, clinics, and doctors offices are using telehealth to see their patients. These companies are all required to keep your protected health information safe.

Learn more about telehealth at [www.telehealthresourcecenter.org](http://www.telehealthresourcecenter.org).

This fact sheet was made possible by the 14 Telehealth Resource Centers and administered through grant #5U29HC00105 from the Office for the Advancement of Telehealth, Federal Office of Rural Health Policy, Health Resources and Services Administration, Department of Health and Human Services.

# NCTRC: Telehealth 101 Infographic

**TELEHEALTH BRINGS THE RIGHT HEALTHCARE TO PATIENTS WHERE AND WHEN THEY NEED IT**

## Telehealth 101

the basics

Updated Sept 2017

### Today's Technology is Being Leveraged to:

- Monitor patients' health status and behaviors remotely
- Meet face to face with patients using video conferencing to have discussions and provide treatment
- Obtain images for diagnostic purposes using specialized scopes and cameras
- Capture, store and then forward images to remote providers who can make a diagnosis and provide treatment recommendations
- Educate patients and providers through apps and video conferencing
- Monitor the impact of patients' daily activities on their health status
- Provide patients with tools to assist them in adopting behaviors to promote their health

### What are your telehealth Goals?

- Increase **Access** for Patients?
- Increase **Market** for Providers?
- Reduce **Costs**?
- Improve Health **Outcomes**?
- Improve **Patient Satisfaction**?
- Improve **Provider Satisfaction**?

#### Factors to Consider Regarding Licensure

Providers should refer to the guidelines of their licensure boards. However, these general rules apply:

- Providers must be licensed in the state where the patient is located.
- Telehealth can be a valuable tool that allows all types of healthcare providers to work to the top of their license but not beyond it.
- Multi-state licensure compacts have been looked to as a solution for licensing barriers, though the methods vary. The Nurses Licensing Compact offers one license that is valid in multiple states. The Interstate Medical Licensure Compact for physicians offers an expedited process to obtain a license in a compact state.

#### Factors to Consider Regarding Credentialing

In July of 2001, the Centers for Medicare and Medicaid Services' final rule on credentialing and privileging established a process for originating site hospitals (location of the patient) to rely on the credentialing and privileging decisions of the distant site hospital (location of the specialist) for telehealth practitioners.

Hospitals should also check their state Medicaid policies to ensure that they do not have additional requirements.

**Need help taking the next step? We can help!**

Telehealth Resource Centers are federally funded to provide resources and technical assistance for telehealth program development.

Find your **Regional Resource Center** or one of two National Centers focusing on technology assessment and telehealth policy at [TelehealthResourceCenters.org](http://TelehealthResourceCenters.org).

## Reimbursement Buckets

### Medicare

Medicare is a Federal program administered at the federal level. Medicare provides some reimbursement for telehealth services. The program has specific requirements in three major areas: physical location of the patient, clinical service being provided and the provider's credentials. CMS's publication, [Telehealth Services](#), provides an excellent overview of related Medicare policies.

You can find out if your location meets the rural eligibility requirements using [USDA's Payment Eligibility Analysis](#).

### Medicaid

Medicaid is a Federal program that is administered at the state level. Some states have laws to dictate Medicaid telehealth reimbursement policies and some states do not. Medicaid reimbursement varies greatly among states.

For information about Medicaid policies in your state, contact your Regional Telehealth Resource Center or visit [Cchpca.org](http://Cchpca.org).

### Private Insurance

Like Medicaid, private insurance mandates are administered at the state level. Some states have laws to dictate telehealth reimbursement policies and some states do not. Private insurance reimbursement varies greatly among states.

For more information, contact your Regional Telehealth Resource Center or visit [Cchpca.org](http://Cchpca.org).

### Reducing your Upfront Expenses

#### Equipment Purchases

- Carefully match your selection to clinical needs
- Develop models built on low cost technology options when possible
- Look to grant opportunities to capitalize the investment (e.g. the RUS Distance Learning and Telemedicine grant program)

#### Administrative Costs

- Optimize use of available reimbursement for services
- Adapt solutions from business plans of efficient and effective programs
- Explore HIPAA's grant opportunities for program development (ONHP Rural Health and QAT network development grants)

#### Connectivity Costs

- Check your eligibility to participate in Universal Service Administrative Company subsidies
- Explore possibilities of reduced rates through FCC Regional Pilot Projects and state-level Healthcare Connect Fund programs

### Choosing Your Equipment and Vendor(s)

Organizations are integrating a variety of technologies into their telehealth programs, from off-the-shelf webcams/laptops, tablets, and smart phones, to specialized field kits, mobile carts, wall-mount stations, and kiosks. Many systems integrate peripheral devices, such as exam cameras, stethoscopes, otoscopes, dermatoscopes and more. Telehealth software continues to evolve rapidly, featuring cloud-based videoconferencing, workflow and practice management tools, and EHR integration. For tips on equipment selection, contact your regional Telehealth Resource Center or visit [TelehealthTechnology.org](http://TelehealthTechnology.org).

#### Factors to Consider Regarding HIPAA/Privacy

The technology alone cannot make one HIPAA compliant. Human action is required in order to meet the necessary level of compliance that is required. HIPAA does not have specific requirements related to telehealth. Therefore, a telehealth provider must meet the same requirements of HIPAA as would be needed if the services were delivered in-person.

Additionally, states may have their own privacy and security laws with which providers must be familiar. HIPAA is a baseline to protecting health information and some states may actually have a higher bar a provider must meet in order to be compliant. States also may have specific internet vendor laws that may not be directed at health services, but nonetheless impact them because they are services sold via the Internet.

If a provider is offering services in another state, it would be prudent to look into the state laws covering these areas.

#### Factors to Consider Regarding Prescribing

The Ryan Haight Act dictates how telehealth (telemedicine is the term used in the Act) may be used to prescribe controlled substances. The Act provides specific scenarios on how the transaction between patient and provider must take place.

States have control over how everything else is prescribed when telehealth is used and the policies vary across states. Some states have very specific rules for the use of telehealth in prescribing while others are more vague or silent. Some of the rules center on whether telehealth is adequate to establish a patient-provider relationship which, again, varies across the states.

For more information about state laws and regulations, contact your Regional Telehealth Resource Center or visit [Cchpca.org](http://Cchpca.org).

Get this document on an interactive site (with live links) on our website or use this QR code to link directly to the file.

The National Consortium of Telehealth Resource Centers (NCTRC) is an affiliate of 14 Telehealth Resource Centers funded individually through cooperative agreements from the Health Resources & Services Administration, Office for the Advancement of Telehealth. The goal of the NCTRC is to harmonize the consistency, efficiency, and impact of federally funded telehealth technical assistance services.

This fact sheet, originally developed by the Northeast Telehealth Resource Center, was made possible by the NCTRC and administered through grant #U22EH000365 from the Office for the Advancement of Telehealth, Federal Office of Rural Health Policy, Health Resources and Services Administration, Department of Health and Human Services.

This fact sheet is for educational purposes only and does not constitute legal advice.

# Family Center Regional Guides: Referral to Support and Partnering with Family-Led Organizations

## REFERRAL TO SUPPORT AND PARTNERING WITH FAMILY-LED ORGANIZATIONS: A REFERENCE GUIDE

The National Genetics Education and Family Support Center (Genetics Education & Family Support Center) is a companion project to the Regional Genetics Networks (RGNs). RGNs link medically underserved populations to quality genetic services and provide resources to genetic service providers, Primary Care Physicians, public health officials, and families. In many cases though, linking isn't enough. Individuals and families need direct support and assistance.

The Genetics Education & Family Support Center works to:

1. Assist the RGNs in their efforts to develop meaningful partnerships with families and family-led organizations and reach medically underserved and diverse families.
2. Provide emotional, informational, and navigational support for individuals and families who have, or are at-risk of having a genetic condition;
3. Provide education and resources on genetic conditions;
4. Link individuals and families to services and supports, especially those families in underserved areas
5. Help families develop skills to partner with professionals and improve systems of care

The following family-led organizations can help families navigate the system of care system and connect families to the information, resource, and support services they may need. In addition, family-led organizations can partner with RGNs and other families to help build capacity for family leadership and engagement to improve genetic educational materials, services, and programs.
